

TIPS FOR PREPARING SCIENTIFIC PRESENTATIONS THAT WILL BE RECORDED AND POSTED ONLINE

1) Don't use images that you snagged from Google Image search without checking copyright status. Attribution is not necessarily sufficient. Some pages specify the conditions for image use (e.g., non-commercial, attribution required). If in doubt, find another image. Some sources of free re-use images are below (though these sometimes require attribution). Wikimedia Commons has many useful images and specifies if they are protected and whether attribution is required.

<http://pixabay.com>

<http://www.public-domain-image.com>

<http://search.creativecommons.org>

<http://www.freedigitalphotos.net>

<http://www.flickr.com/search/?q=&l=cc&ss=0&ct=0&mt=all&w=all&adv=1>

(parts at end set search to "Creative Commons-licensed content")

2) For images taken from published papers (even your own, if you don't hold copyright), click on the button online at the journal site that says something like "Rights & permissions" or "Request Permissions". You may need to create an account (many use the same service called "RightsLink") and specify the use. Often these permissions are free, but some journals may require a fee.

Note-- Creative Commons open access papers (e.g., from *PLoS* journals) often permit unrestricted use, distribution, and reproduction in any medium, provided the original author and source are credited. No permission request is required for these, but do include the source on the slide and/ or at the end.

3) If taking images from a webpage, please contact the source to obtain permission, and confirm they are the ones who originally produced the image (or otherwise have rights on it). For example, if someone illegally reposts a copyrighted image, you may not get legal permissions from this person to reuse it.

4) Remember that the presentation will be online in a public medium for the indefinite future. Rude language or unconstructive criticism of work by other people is ill-advised. Strongly political statements may yield repercussions.

5) Do consider whether online preservation of your talk will affect subsequent publication. Most journals in ecology/ evolution don't have a problem with even manuscript preprints, but a few (especially in other areas) do. For more information, see:
